## DETAILED ACTION

### *Election/Restrictions*

Claims 1-26 and 45 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 2/13/06.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 27, 29, 30, 32-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Maguire et al. (US 6997925). In figure 21A Maguire et al. disclose an electrosurgical device comprising a shaft having a distal portion; a return electrode (2130) at the distal portion of the shaft and having a return electrode surface area, the return electrode distally terminating in a tip portion; at least one active electrode (2126) at the distal portion of the shaft and having an active electrode surface area, the active electrode further comprising an arm portion being radially spaced from the return electrode, wherein the tip portion of the return electrode is distally spaced from the arm portion of the active electrode; and a connector located at the proximal portion of the

shaft and adapted to couple the return electrode and each active electrode to respective poles of the high frequency power supply.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 28 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maguire et al. Maguire et al. teach all of the limitations of the claims except the return electrode having a surface area greater than the active electrode and the raised surface area comprising a coil. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the return electrode with a greater surface area than the active electrode and to provide a coil as the raised surface area since it has been held that changing the size and shape of the essential working parts of a device only involves routine skill in the art.

***Response to Arguments***

Applicant's arguments filed 7/19/06 have been fully considered but they are not persuasive. Applicant argues that Maguire fails to disclose, teach or suggest an active electrode comprising an arm portion radially spaced from the return electrode. According to Applicant, all of the elements of Maguire are disposed about a common radius and no element is provided at the center of the circle formed by the ablation elements. In figure 21A Maguire clearly illustrates an active electrode radially spaced

from a return electrode. Regarding the argument that, the positive and negative ablation elements of Maguire fail to anticipate the active and return electrodes of the independent claims, see column 38 line 57 through column 39 line 14 of Maguire.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
